

Roadheaders

Antraquip Roadheaders are advanced, self-propelled, extremely powerful rock-cutting machines designed to excavate roadways, tunnels and chambers continuously without using explosives.

Powered electro-hydraulically, they emit no fumes and are used extensively in coal mining, mineral mining and underground construction projects, where their ability to excavate the desired profile without causing harmful vibrations is highly valued for both environmental and safety reasons.

| Model | AQM 50 | AQM 100 | AQM 150 | AQM 175 | AQM 200 | AQM 260 |
|-------------------------------|--------|---------|---------|---------|---------|---------|
| Weight class: tons | 13 | 27 | 35 | 65 | 65 | 85 |
| Total power: kW | 78/163 | 135/220 | 205/264 | 300/404 | 372/372 | 340/464 |
| Cutter transmission power: kW | 30/60 | 110/132 | 150/175 | 175/186 | 200 | 260 |
